

**Professional Internship for PhD Students (PIPS) – BBSRC
at Reflection Therapeutics, Babraham Institute, Cambridge, UK**

Reflection Therapeutics, an early stage start-up using cell and gene therapies to treat neurodegeneration, is looking for an intern (three month placement), interested in research and development in an industrial setting:

This internship will cover:

1. Self-contained project in an industrial setting (50%)
2. Project management to tight deadlines in an industrial setting under supervision from experienced project management professionals (20%);
3. Principles of business development for a start-up (15%);
4. Business and commercialisation, leadership, public engagement, networking, and process organisation at Reflection Therapeutics (15%)

Ideal candidate will:

1. Have a strong interest and understanding of mammalian cell biology or human or murine immunology;
2. Have a strong interest in translational research and discovery and development of therapeutics;
3. Have a hands-on experience of cell culture, transfection, transduction, cell-based assays, flow cytometry, western blot and ELISA, molecular biology;
4. Have an interest of working in an early stage pre-clinical company;

Preferred start ASAP. Please contact info@reflectiontherapeutics.com with any questions or applications (CV and a cover letter).
